Browser Support on the CMS Application

CMS supports the current released versions of Internet Explorer and Firefox. In addition, we support the previous two major releases of Internet Explorer and Firefox.

Browser settings and unique performance of a given browser may cause a CMS page to display with minor differences when viewed with different browsers.

Browsers other than those supported on the CMS site may still function. These browsers may cause a loss of functionality on the site.

To verify the version of your current browser, click on “Help”, then click on “About <browser name>”. A pop up screen containing the browser version will display.
